DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C.

121:

- I. Claims 1-9 and 19-43, drawn to an integrated circuit having a piezo element, classified in class 310, subclass 316.01.
- II. Claims 10-18, drawn to an integrated circuit having a piezo element with amplifiers, classified in class 310, subclass 323.17.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group I does not require having a Class A or AB amplifier connected to received an output of the Class A amplifier and to perform the change from current mode or voltage mode. Also, it is not require to control a piezo element with a Class A amplifier or adjusting the impedance of a Class A amplifier.

The subcombination has separate utility such as having an integrated circuit with a Class B amplifier or having sensors to aid in the adjusting of the impedance of an amplifier. Other methods known are done by using a close loop system in an amplifier or having threshold values for the output of the amplifier.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper and because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
